SUMMARY

Aspiring Software Engineer with hands-on experience in Java backend and Spring Boot through internship and academic projects, building scalable REST APIs and reliable database-driven systems. Eager to solve real-world engineering problems at scale, with a strong foundation in DSA and a continuous drive to learn emerging backend and cloud technologies.

EDUCATION

B.Tech in Computer Science and Engineering
Future Institute of Engineering & Technology, Bareilly (AKTU)
CGPA: 7.85

June 2022 – June 2026

TECHNICAL SKILLS

Languages:	Java, C, JavaScript, SQL
Frameworks:	Spring Boot, Spring MVC, Spring Security, REST APIs, Hibernate
Cloud/Database:	AWS (EC2), MySQL
Tools/DevOps:	Git, GitHub, GitHub Actions (CI/CD), Maven, Postman
Coursework:	Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, DBMS, RESTful API

EXPERIENCE

Internship | Where U Elevate, Noida

Dec 2024 – Mar 2025

- Worked on Where U Elevate's AI-powered talent infrastructure platform, connecting industry and academia through hackathons and next-gen hiring pipelines used by 1000+ students and professionals across India.
- Built and maintained backend modules in Java and Spring Boot for candidate onboarding, hackathon registration and user management, handling end-to-end request flow from API to database.
- Led REST API development across the pipeline — implemented CRUD operations, request validation, and exception handling using Spring Boot and Hibernate/JPA, integrated with MySQL for data persistence.
- Debugged and resolved 15+ API-level bugs during feature development, verifying endpoint behavior using Postman before deployment.
- Collaborated with a 4-member dev team in sprint-based development, contributing to feature rollout for hackathon and hiring modules used India-wide.

PROJECTS

Expense Tracker with Multi-Tenancy | Java | Spring Boot | Spring Security | Hibernate | MySQL

- Architected a shared-schema multi-tenant system using a tenant-discriminator column with a Hibernate filter applied at the session level, so every query is automatically scoped without manually adding a WHERE tenant_id clause everywhere.
- Built JWT-based authentication embedding tenant and role claims in the token, so authorization checks (Admin, Manager, Employee) happen at the filter layer before requests reach business logic, reducing per-endpoint boilerplate.
- Prevented cross-tenant data leakage by enforcing tenant isolation at both the query layer (Hibernate filter) and the API layer (token validation), tested with 20+ negative test cases simulating unauthorized cross-tenant access.
- Designed aggregation endpoints for monthly and category-wise reports using indexed SQL group-by queries, cutting report generation time from ~1.2s to under 300ms on a dataset of 1000+ transaction records.
- Added audit logging for sensitive actions (expense approval/rejection) capturing user, tenant, and timestamp, supporting basic compliance/traceability needs.

Student Management System | Java | Spring Boot | Hibernate | MySQL | JavaScript

- Architected a 3-layer backend (Controller, Service, Repository) to separate business logic from data access, improving maintainability and reducing code duplication.
- Designed and implemented 18+ REST APIs to manage student registration, login, profile, semester details, attendance, and fee records with proper HTTP status codes and validation.
- Built a normalized relational database with 2 core entities, 1 foreign key relationship, and 15+ attributes, ensuring referential integrity and minimizing data redundancy.
- Developed backend business logic to automatically link student academic records with registered user accounts using entity relationships, eliminating duplicate entries and maintaining data consistency.
- Implemented server-side validation for email uniqueness, phone number, mandatory fields, and duplicate registration requests, preventing invalid or inconsistent data from reaching the database.

ACHIEVEMENTS

- Solved **200+ DSA** and programming problems across LeetCode and GeeksforGeeks, maintaining consistent problem-solving practice alongside coursework.
- Secured a **Top 5** academic rank across the entire B.Tech cohort.
- Achieved Legend Tier in Google Cloud Arcade Program, completing multiple hands-on cloud and AI learning challenges.
- Certified as an **Oracle** Cloud Infrastructure 2025 AI Foundations Associate, validating foundational cloud and AI concepts.
- Completed **Core Java 21** SE Developer (Udemy) and SQL Intermediate (HackerRank) certifications, strengthening backend fundamentals.
